Batch Processor

Profile 2530 / 3040 BP

HEIGTS Processor

The **Profile 2530 / 3040 Batch Processor** is a compact, high productivity batch type flexographic plate processor offering high speed washouts of the entire plate area via a series of seven (2530) or eight (3040) rotary brushes mounted in a twin directional motion cassette providing rapid washout and wiping brush.

The result is a "dry-to-touch" plate produced in a fraction of the time taken by alternative processors, which feed the plate incrementally.

Single full size plates or a series of smaller plates can be produced in one go using the fully featured sticky transport plate.

The compact size of the Profile 2530 / 3040 Batch Processor is ideal for installation where space is limited. A modern screen-driven control and easy maintenance access provides user-friendly operation.

Features

Compact Size	Integrated Heater and Cooler
Batch Processing	"Dry-to-Touch" Plate Results
Fully Featured	Worldwide Application
Clear Intuitive Operator Panel	EC Safety Standards
