

**USED OPTICAL MOUNTING MACHINE
MODEL BIEFFEBI MIRAGE 306-250 SL**

For perfect pre-registration of corrugated box and sack printing dies.
The cylinder maximum repeat is 1360 mm and length of the plate cylinder is 2500mm.

The viewing mirror spans the full length of the cylinder. All motions are motor-operated. Very accurate layouts can be drawn by means of longitudinal and circumferential rules. Printing pressure is controlled by means of a micrometric device. It is equipped with Matthews mounting system. The sheet is locked on the plate-cylinder. A paper sheet is taped on the impression cylinder and reference lines are accurately drawn on it by the built-in tracing device. By looking through the semi-reflecting mirrors, the operator sees the image of the lines drawn on the impression cylinder, superimposed over the image of the plate to be registered. This enables a perfect and quick mounting to be made. After mounting the plates, they are inked by hand in order to print the proof.

SALES CONDITIONS

Delivery basis: Ex works Hanau.

Delivery time: Approx. 6 working weeks after receipt of the order, drawings and deposit.

Payment conditions: 50% in advance with the order, 50% before crating, at advice machine ready to be despatched.
